SUBJECT INDEX

Acidity, exchange, in soils, 159
Actinomyces in soil as affected by rye or clover, 434
Adobe, shrinkage of clay, 27
Adsorption, polar, by colloids, 348
Alkaline earths and alkali bases in soil profile, 75
Amide—
  hypothesis of nitrogen fixation, 212
  method of determining, 220
  nitrogen in soybeans, 207
Amino nitrogen in soybeans, 207
Ammonia—
  biological vs. photochemical oxidation of, 444
  in forest litter, 232, 235
  irradiation effect on oxidation of, 441
  hypothesis on nitrogen fixation, 208
Ammonium nitrate, utilization by soybeans, 205
Anion adsorption by soil colloids, 299–314
Apples—
  arsenic assimilation by, 44
  copper assimilation by, 54
  lead assimilation by, 49
Arsenic—
  assimilation by apples and pears, 44
  in soils, 40
Bacteria, root-nodule, studies on, 409–423
Barley—
  ammonium and nitrate nitrogen nutrition of, 91
  culture solution for, 93
Base exchange—
  of organic layers of forest soils, 231
  studies on organic and inorganic colloids, 344
Bases—
  capacity of soil to bind, 158
  dialyzeable, discussion, 157
  exchangeable, effect on phosphate fixation, 279
  in forest litter, 232, 235
  in soil profile, 76
Beans, horse, root studies, 193
Bentonite colloid, electrodialyzed, 333
Bentonite-sand mixture as media for microorganisms, 321
Books, *see* Book reviews at end of letter B.
Boron—
  copper relationships, 255
  deficiency, notes on, 253

BOOK REVIEWS

Buckman, H. O. *See* Lyon, T. L.
Lyon, T. L., and Buckman, H. O. Nature and Properties of Soils, 249
Soils, Nature and Properties, 249

Capillary space in soils, 25
Carbon-nitrogen ratio in soils, 148
Cataphoresis study of soil colloids, 349
Cellulose—
  decomposing organisms and organic matter, 436
  decomposition—
    in sand-bentonite media, 321
    in synthetic and natural soils, 385–397
Chromium, response of barley to, 107
Clay, moisture properties, 25
Climate of western Washington, 141
Clover—
  composition, 428
  decomposition at various growth stages, 425
Colloidal—
  behavior, laws of soil, 151
  materials, properties after electrodialysis, 334
  properties, change in, due to silicate and phosphate adsorption, 303
Colloids—
  bentonite, 333
  composition of, of several soil series, 301
  determining small amounts of, 245
  downward movement, 29
  in limed and unlimed soils, 266
  mechanism of phosphate retention by soil, the Mattson presentation, 307
  migration velocity of mineral soil, 349
  organic and inorganic soil, reaction between, 331

Colloids—(*continued*)
phosphate adsorption by, 303
physicochemical reactions, 331
relation to potassium fixation, 274
silicate adsorption by, 303
soil, physical properties, 68
soil profile—
alkali and alkaline earth bases in, 75
bases in, 76
nitrogen in, 74
organic matter in, 74
reaction, 72
separation, 70
silica-sesquioxide ratio, 75
viscosity studies on, 335
Conductivity, relation between, and total solids in water, 244
Copper—
as a catalyst in crop production, 252
assimilation by apples and pears, 54
boron relationships in plant growth, 255
in soils, 52
nitrogen nutrition of barley as affected by, 91
potassium relationships in plant growth, 256
Cotton—
constituents obtained by electrodialysis, 217
fertilizers for, 1, 217
Culture solution—
ammonium, nitrification in, 95
composition for barley, 93
Duff, composition, 232
Electrodialysis—
constituents of the cotton plant obtained by, 217
studies in, of soils, 399–409
technic and apparatus, 218
Exchange acidity, maximum in soils, 159
Exchange capacity—
of organic and inorganic colloid systems, 344
organic matter and, 123
Exchange neutrality, definition, 161
Fertilizers—
concentrated, for cotton soils, 1
effect on cotton plants, 217–229
fractional application of nitrogenous, on wheat, 293–298
lime additions to, 21
magnesium additions to, 21
methods of applying, 22
Fertilizers—(*continued*)
minor elements in, 21
secondary elements in, 21
Forest—
litter, analyses of several types, 235
soils, nutrients and base exchange in, 231
Fungi in soil as affected by rye or clover, 435
Glei, description, 455
Heat of wetting of soils, 70
Humus—
effect on nitrification, 321
estimation of soil, by the permanganate method, 323
of forest litter, 234
studies in, 323–327
Hydrogen-ion concentration—
in cropped and uncropped soils, 143
in soil profile, 71
relation to—
nitrogen nutrition of barley, 91
phosphate fixation in soils, 278
Hydrogen peroxide, effect on exchange capacity of soils, 123
Hydrometer, a sensitive, for soil colloids, 245
Hydroxylamine hypothesis on nitrogen fixation, 209
Iron oxide, changes in free, affecting anion adsorption, 299
Irrigation water—
nitrogenous fertilizers added to, for wheat, 293
soluble salts in, 241
Lead—
assimilation by apples and pears, 49
in soils, 46
Legumes, wild, and their relation to inoculation, 417
Lime—
addition to fertilizers, 21
effect on potash fixation and availability, 265
Magnesium additions to fertilizers, 21
Manganese, relation to—
chlorosis, 252
nitrogen nutrition of barley, 91
Meadow soil, definition, 447
Mechanical analyses of soils, 68, 87
Microbiological—
aspects of decomposition of clover and rye, 425–439
processes in synthetic soil, 319
Microflora, soil, as affected by rye and clover, 432

Microorganisms, abundance as influenced by organic matter, 433
Minor elements, use in North Carolina agriculture, 251–263
Moisture—
content of soils, method of determining 377
equivalent of soils, 69
properties of clay, 25
sampling for soil, 24
Molybdenum, response of barley to, 107
Mull, composition, 232
Neubauer method for available potash, 267
Nickel, response of barley to, 107
Nitrates—
biological vs. photochemical formation, 444
cellulose decomposition and, 393
fixation in soils, 371
formation in soil, 361–375
in organic remains of forest litter, 232
in soil as affected by time of application of nitrogen, 294
irradiation effect on formation of, 441
Nitrification—
as affected by—
bentonite, 321
drying, 368
humus, 321
sunlight, 365
in ammonium culture solutions, 95
in cropped and uncropped soils, 148
Nitrogen—
amide, in soybeans, 207
amino, in soybeans, 207
distribution in soil profile, 73
fertilizer, effect on wheat when added in fractions, 293
fixation—
as affected by bentonite and humus, 321
hypotheses on, 208
relation to soybean metabolism, 203
fractions in cotton plants, 220
in forest litter, 232
metabolism of soybeans, 203–215
nutrition of barley, 91
source, as a factor in cellulose decomposition, 387
transformation from rye and clover, 431
Nutrients—
in organic layers of forest soils, 231
major, in relation to minor elements, 256
Organic—
carbon, titration method for determining, 141
colloids—
effect on migration velocity of soil colloids, 349
in reaction with inorganic colloids, 331
matter—
base exchange capacity, nitrogen, calcium, potassium, phosphorus content of, in relation to growth of spruce, 233
changes in, as a result of cropping, 139
destruction, method, 87, 124
distribution in soil profile, 74
in cropped and uncropped soils, 143
quality, 148
relation to potassium fixation, 274
removal for exchange studies, 123
removal for mechanical analyses, 68, 87
matter, effect on—
cellulose decomposing organisms, 436
phosphate fixation, 279
remains, productivity of, 232
soils, *see* Soils organic
Oxygen supply, relation to nitrogen nutrition of barley, 91
Pears—
arsenic assimilation by, 44
copper assimilation by, 54
lead assimilation by, 49
Phosphates—
calcined, efficiency, 175–183
fixation in soils, 277–291
relation in soil to weight of roots and shoots, 185–202
rock, from several sources, composition of, 177
Phosphorus—
absorption by plants, 179
available, in forest, 232
Plant—
material, composition, 427
nutrition—
minor elements in, 21
soil properties affecting, 23
Plants—
metabolic activities as influenced by nitrogen carriers, 110
phosphoric acid in, grown with different sources of phosphorus, 179

Podzols—
colloidal behavior, 151
glei-meadow, 455
ground water, 448
Polarograph, use in studying soils, 399
Pore space—
apparatus for determining, 469
determination as a field method, 467–477
Potash fixation as affected by lime, 265–275
Potassium-copper relationships in plant growth, 256
Rendzina—
colloidal behavior, 159
organic matter content, 354
Roots—
distribution in deep soil, 33
nitrogen fractions in, of soybeans, 207
phosphorus in, 190
ratio of, to shoots with reference to phosphorus fertilization, 185
Rye—
composition, 428
decomposition at various growth stages, 425
Salinometer for salts in soils and irrigation waters, 241–247
Salts, soluble, in soils and irrigation water, 241
Silica–sesquioxide ratio in soil profile, 75
Soil—
aeration, root distribution as affected by, 33
bases, *see* Bases
Brinell number of the, as an index, 484
class and series, relation to exchange capacity, 133
cohesion, measuring, 481
colloids, *see* Colloidal, Colloids
cracking, 27
erosion, measuring, 483
horizons—
clay in, 30
glei, 455
irradiation by artificial light, 441
pore space in, 27, 467
profile—
alkali bases in, 75
alkaline earths in, 75
bases in, 76
calcium, phosphorus, and potassium (available and exchangeable) in, 34
characteristics of the, of southeastern Washington soils, 65–85
Soil—
profile—(*continued*)
colloids in, 70
humus in, 34
nitrogen in, 73
of glei-meadow podzol, 455
of gray forest, 453
of ground-water podzols, 449
organic matter in, 73
reaction, 71
silica-sesquioxide ratio in, 75
root distribution in deep, 33
series, analyses, description, or experiments with—

shrinkage, 27
specific gravity, 474
structure, 27
synthetic, as a medium for microbial processes, 319–322
volume determinations, 473
Soils—
amphoteric points of, 151

Soils—(*continued*)
Appalachian mountain and plateau, exchange capacity, 129
arsenic in, 41
boron deficiency in, 253
chemical studies of, 71
Coastal Plain, exchange capacity, 132
copper in, 52
cropping of, changes in organic matter, 139
exchange capacity of, 123; *see* also Bases, Exchange capacity
fertilizers for cotton, 1–22
forest, nutrients and base exchange, 231–239
gray forest and related, 452
kryptopodzolic, description, 447
lead in, 46
mechanical analyses—
after removal of organic matter and carbonates, 68, 87
hydrometer for, 315
minor elements in, 251
moisture content, method of determining, 377–383
of—
Maryland, 123
southeastern Washington, 65
western Oregon, 447
western Washington, 139
organic, copper as a catalyst for, 257
Soils—(*continued*)
organic layers of forest, 231
phaneropodzolic, description, 447
phosphate fixation in, 277
physical characteristics, 481–487
physical properties, affecting plant nutrition, 23–36
physical studies, 68
Piedmont, exchange capacity, 127
podzol, *see* Podzols
potash fixation in, 265
red (Mediterranean), data on, 167–174
rendzina, 354
River Terrace and Flood Plain, exchange capacity, 131
salts, soluble, in, 241
spray residue accumulation in orchard, 37–63
synthetic, cellulose decomposition, 385
Soybean, nitrogen metabolism, 203
Spray residues in soils, 37
Walnut, root distribution, 33
Water—
irrigation, salts in, 241
relation between conductivity and total solids in, 244
Wheat—
composition as affected by nitrogen applications, 295
root studies, 188
